

WHITEMORE NGWIRA

PRINCIPAL TECHNOLOGY ARCHITECT & AI SYSTEMS ENGINEER

Cloud Architecture (AWS Primary) | AI Systems & Gateways | Networks, Databases & Security | DevOps & IaC

Johannesburg, South Africa | +27 83 290 2158 | hello@nwhite.systems

WEBSITE & PORTFOLIO: <https://nwhite.systems/> | RECRUITER BRIEFING: <https://nwhite.systems/portfolio-review>

To Whom It May Concern,

I am writing to express my interest in senior technical leadership roles as a Principal Technology Architect and AI Systems Engineer. With more than 15 years of cross-disciplinary experience spanning cloud architecture (Amazon Web Services primary, with Microsoft Azure and Google Cloud Platform), distributed networking, multi-engine databases, and zero-trust security, I connect high-level organisational discovery with hands-on prototype-to-production delivery across complex operational environments.

In my executive role as Principal Systems Architect and Digital Infrastructure Lead at Socinga Africa (January 2025 – Present), I direct architecture governance, cloud infrastructure, and governed AI automation across four core divisions: insurance, creative studios, mining, and foundations. I architected our cloud-first enterprise platform, establishing formal Architecture Decision Records (ADRs), domain and API boundaries, and Role-Based Access Control (RBAC). To eliminate administrative friction and processing latency, I operationalised an enterprise LLM-assisted document-intake workflow from prototype into live operation under Responsible AI governance—incorporating Retrieval-Augmented Generation (RAG), structured data extraction, accuracy evaluation, audit logging, and automated rollback controls. Concurrently, I introduced AI-accelerated engineering across the software development lifecycle (SDLC), releasing billable capacity across an active portfolio valued internally above ZAR 5 million.

Through my independent consultancy, N.White Systems, maintained continuously since August 2009 across South Africa and the SADC region, I deliver modular Infrastructure as Code (37 Terraform blueprints with S3 remote state and DynamoDB locking), container orchestration with Kubernetes (Amazon EKS v1.32), and intelligent AI gateways (LiteLLM proxy and Cloudflare AI Gateway across 300+ cities). Landmark production platforms include architecting [EarCodeX](#) as a cloud-native insurance operations platform, engineering industrial telemetry for the [Socinga Smart Mining Platform](#), and deploying live education ecosystems ([Cineterns](#), [Oasis College](#)). Furthermore, I treat multimedia and broadcast pipelines as high-stakes systems engineering: designing automated ingest, encrypted cloud storage, automated quality control (QC), broadcast playout, and archival preservation across 21 major productions and six regional television networks.

Holding an Honours Bachelor of Arts in Journalism and Media Studies alongside professional diplomas in Business Administration, Marketing, and Information Technology, and currently pursuing an Executive MBA to further sharpen my corporate leadership acumen, I bridge strategic executive vision and technical execution with rigorous governance, velocity, and commercial impact. I welcome the opportunity to discuss how my systems architecture background can deliver scalable value to your organisation.

Yours sincerely,

Whitemore Ngwira

Principal Technology Architect & AI Systems Engineer
